

# GIT- Pull from and mess with the class REPO

in list [Breakouts](#)

 [Edit the description...](#)

## Steps

[Delete...](#)

0%

- ☐ 1) Go to this REPO: [https://github.com/TommyWaalkes/Jan\\_2018\\_FullTime\\_..Net](https://github.com/TommyWaalkes/Jan_2018_FullTime_..Net)
- ☐ 2) Make a new folder on your desktop called "class repo"
- ☐ 3) Partner up! We're going to be working out of GIT bash
- ☐ 4) Open GIT Bash to your new folder
- ☐ 5) Do GIT init which sets up a local repo for you
- ☐ 6) Your folder should be empty, do git git remote add origin [https://github.com/TommyWaalkes/Jan\\_2018\\_FullTime\\_..Net](https://github.com/TommyWaalkes/Jan_2018_FullTime_..Net)
- ☐ 7) Do git pull, what happens?
