

## MVC .Net Exercise

in list [Exercises](#)

Description

[Edit](#)

<https://github.com/TommyWaalkes/CoffeeExample>

Make a new MVC project. Pull down the files from this repo and figure out where they can live in the project.

1) I have several views, a model, and a controller how I do put them in the right place?

2) Show me an example of Model and how to use it

3) Show me an example of a View and how to use it

4) Show me an example of a controller and how to use it.

5) Where is the top menu bar stored? How do I add a link to it?

6) How do I pull input from a form into another page?
