

Searching - List

in list [Exercises](#)

Description [Edit](#)

Say we have this list:

```
List<string> goodMovies = new List<string>(){ "Lord of the Rings", "Titanic", "Alien", "Aladdin", "Plan 9 from Outer Space", "Saving Private Ryan", "Anchor Man"};
```

- 1) How would you find the longest title in the list (in terms of title length not run time)?
- 2) How would you search the list, see if The Big Lebowski is present, if not add it?
- 3) How would you search through the list and remove Plan 9 from Outer Space?(trust me it's BAD)
- 4) How would you sort this list Alphabetically? (There's a method for this)
- 5) EXTENDED: How would you sort this list from Longest Name to Shortest Name?
