MIDTERM PROJECT SETUP GUIDE:

1. Team leader: Create a repository on your github account.
2. Team leader: Add the other team members as collaborators.
3. Team members: Accept the invitation to collaborate on the project. You can do that by going to your email to open the invitation link.
4. Team leader: Create a new console application project. Please check the "Create new git repository" check box in the new project page. Save the project.
5. Team leader: Push the project to your github.
   a. git remote add origin {git url from your repo}
   b. git push origin master
6. Team members: Clone the project. (git clone {git url from your repo})
7. Team members: To open the project, double click on the sln file.

If you add classes to your project, when other team members pull the code, they need to add the class manually to Visual studio. To do that, go to the project in the solution explorer, and select "Show all files". After that, right click on the new files, then select "Include in project".

Team leader: Please send the repo link in an email to kamel@grandcircus.co and Jacob@grandcircus.co
